

How the **Performance** pillar is scored for each DPS spec, and which inputs live in **Performance** vs the **Utility** pillar — so no input is counted twice.

Performance = 0.7 · activity% (boss + trash) + 0.3 · overlay + engineering bonus. Activity (GCD uptime) is the buff/tempo-independent backbone. The **overlay** averages three ability classes: **on-CD** (rate-scored — press your cooldown on time), **maintain** (DoT / self-buff **uptime %** — kept it up), and **rotation share** (your main nuke as a % of **rotational casts** — were you casting the right thing, not just busy). **Filler** spells (Shadow Bolt, Steady Shot, Lightning Bolt, Sinister Strike, Starfire, Arcane Blast) fold into the activity backbone — not scored. Optional maintains drop out if the spec doesn't run them (no penalty). **Parse %** is shown as context, *not* scored. Engineering (sapper/bomb) only lifts, never drags.

PER-SPEC — PERFORMANCE INPUT VS UTILITY FACETS

SPEC	TIER	PERF WT	PERFORMANCE (SCORED)	UTILITY (SEPARATE PILLAR)
Warrior Fury	dps0	×2.25	Bloodthirst + Whirlwind + activity	Battle Shout, Sunder
Warrior Arms	dps0	×2.25	Mortal Strike + Whirlwind + activity	Battle Shout, Sunder
Rogue Combat	dps0	×2.25	Slice & Dice uptime + activity	Kick, Expose Armor
Mage Arcane	dps0	×2.25	Arcane Blast rotation share + activity	Counterspell (interrupt)
Warlock Affliction	dps1	×1.75	Corruption + DoT uptime + activity	Stones, Curse of the Elements
Warlock Destruction	dps0	×2.25	Shadow Bolt rotation share + Immolate + activity	Stones
Hunter Beast Mastery	dps0	×2.25	Kill Command + Steady Shot share + activity	Misdirection
Hunter Survival	dps1	×1.75	Kill Command + Steady Shot share + Serpent Sting	Misdirection, Expose Weakness
Shaman Enhancement	dps1	×1.75	Stormstrike + Flame Shock/Lightning Shield + activity	Windfury → Performance (twist cadence, PR#2)
Shaman Elemental	dps1	×1.75	Chain Lightning + activity	Totem of Wrath
Druid Balance	dps2	×1.0	Moonfire/Insect Swarm uptime + activity	Innervate, Rebirth, Faerie Fire (IFF)
Paladin Retribution	dps0	×2.25	Crusader Strike + Judgment + Seal of Command (twist) + activity	dispels (positive-only)
Priest Shadow	dps1	×1.75	Mind Blast + SW:P + VT uptime + activity	VT mana battery, dispels

Tier sets the composite weighting (perfArchetype): **dps0** pure parse (perf ×2.25, util ×0.5) · **dps1** utility-flavored (perf ×1.75, util ×1.25) · **dps2** utility-first — boomkin, the buff-bot (perf ×1.0, util ×2.0). Tiers are set by how much a spec's utility costs output: rotational/no-cost utility (Shadow VT) → judged on Performance (dps1); Ret went all the way to dps0 — its seal-twist is now SCORED as Performance; a spec that exists for its raid aura → Utility-weighted (dps2). Hunters/healers/tanks resolve by role. Hunter Steady:Auto ratio is shown as a *diagnostic*, not scored (it's haste-driven).

DOUBLE-COUNT CHECK — CLEAN

Every Performance-scored ability was cross-checked against every Utility facet: **no input is scored in both pillars**. It holds by construction — each utility ability is tagged **utility** and kept out of the maintain/on-CD lists.

- Seal-twisting (Ret):** Seal of Command + Crusader Strike + Judgment → all **Performance** (seal-twist is an execution skill, moved out of Utility). Ret utility = dispels only. Scored once. ✓
- Rotation share:** the main nuke's share (Arcane Blast / Shadow Bolt / Steady Shot) is a **Performance** ratio — its casts already fold into activity; the share is a new derived signal, not a second scoring. ✓
- Slice and Dice (Combat):** its uptime is a **Performance** maintain; it's not a Utility facet — scored once. ✓
- Spec-baseline debuffs:** Curse of Elements (affli), Faerie Fire (boomkin), Expose Weakness (survival) are scored as **Utility** uptime — and deliberately kept OUT of those specs' Performance maintain list. Scored once. ✓
- None of {Battle Shout, Windfury, Totem of Wrath, Misdirection, Sunder, Expose Armor, Seal of Command, CoE, Faerie Fire, Expose Weakness} appears in the Performance overlay. ✓

THE ONE CONSCIOUS CROSS-PILLAR SPLIT — VAMPIRIC TOUCH (DECIDED)

VT is the single ability that lives in **both** pillars, **by design**: its **uptime** (did the shadow priest keep it rolling — execution) is a Performance maintain, while its **mana-returned value** (the raid battery it feeds) is a Utility facet (mana). These are **two different metrics of one ability** — keeping it up vs how much mana it returned — not a double-count of the same number. Every other ability is scored in exactly one pillar.

Prep / Execution / Survival pillars are spec-agnostic (consumables+gear / avoidable+AoE-into-allies / deaths+healthstone) — no per-spec double-count risk. Source of truth: PERF_ONCD + PERF_MAINTAIN + utilFacetsFor in template.html · framework: docs/DPS_SPEC_PERFORMANCE_FRAMEWORK.md
